
Core Player
- Apart from playing streams, it have intelligence to know if it is video or audio
- It sends Updates to display in case of video and visual effects in case of audio

File Manager
- Call its functions to deal with files. The player will have its way of dealing with files and dirs
- All file/dir management should concentrate around this Object

Playlist
- Holds list of all playable Files. The Idea is to have automatic list where the Player will sort Video files into separate “videos list” and audio files “audio list”
- User can create his own list whether video or audio

Transcorder
- Convert Files in playlist to and from different formats
- Rip CD/DVD to your favorite format
- This will not form a core part but a plugin!
